

Quality Assurance Engineer

Are you a Software Tester that has a passion for quality? Do you want to be part of an exciting, innovative, and fast paced growing software company? Do you value delivering highly innovative products with high quality for our end users? Our Research and Development organization is looking for highly motivated people who will help the company advance the software to the next level of quality and scalability by designing, implementing, and testing our products in the most efficient way.

WHAT YOU'LL DO:

Our quality assurance engineer's work in teams and plan testing efforts, develop, maintain, and execute test scripts, database validation, install testing, software and web testing. The quality assurance engineers participate in all phases of a project, from user story review, design, demos to final system testing and launch. You will work as part of agile teams, must be a self-starter, and have strong communication and interpersonal skills, as well as a strong attention to detail.

WHAT WE ARE LOOKING FOR:

- Bachelors' degree in Computer Science or related field
- 2 years' experience in software testing
- Experience testing software for sale
- Understand and have good experience with manually testing products including software installations and network configuration
- Analyze user stories for clarity, gain understanding and prepare test cases for new features
- Create/write test scripts for manual execution based on user stories
- Skilled in Agile development methodologies
- Experience scripting in Shell or VBScript (Nice to have)
- Great attitude!
