Quality Assurance Engineer

POSITION SUMMARY

The Quality Assurance Engineer is responsible for the planning, execution and reporting of test results on all products developed in Product Engineering. A Quality Assurance Engineer will be able to be given direction and work independently, providing updates to their manager on a timely basis. A Quality Assurance Engineer is expected to have basic knowledge on at least one product and will be able to assist on other products as needed. In addition, they will perform install, feature, regression and system level testing as well as assist in the development of processes and procedures related to product development. A Quality Assurance Engineer receives work direction directly from a QA Lead or higher.

CORE EXPECTATIONS

• Participate and learn configurations, setup and installations of all systems tested for Calabrio products
• Learn about all Calabrio products developed in Product Engineering and become proficient in using the applications
• Participate in the execution of test cases identified for each project and question the performance of the software
• Develop test cases required for each product in a timely manner
• Help develop test plans required for each product
• Report issues found in Calabrio’s defect tracking system with correct issue severity, describing steps to recreate the issue
• Participate in performance and stress tests
• Participate in the development of test milestones
• Organize and participate in test plan and test case reviews
• Other core expectations will be defined by your direct supervisor/manager

CORE COMPETENCIES

• Good troubleshooting and creative problem solving skills
• Be able to create tests from minimal documentation and user stories
• Good verbal, written and interpersonal communication skills to interact with team members, senior support personnel, high level personnel and customers
• Familiar with a product or project life cycle and what is required at each phase for testing
• Understand and have good experience with manually testing products including software installations and network configuration
• Be able to question software features, performance or behavior
Quality Assurance Engineer

• Good understanding of QA, testing and defect management process
• Able to help define system and user requirements through asking questions or following standards
• Ability to adapt to change in direction quickly
• Other core competencies will be defined by your direct supervisor/manager

EDUCATION/EXPERIENCE

• 4-year technical degree
• Background in quality control and testing of software for sale applications
• 2 years’ experience in testing and/or quality assurance of software

MENTAL/PHYSICAL REQUIREMENTS

• Ability to sit for long periods of time depending on your position and/or getting up and down through your work shift
• Frequent alpha/numeric keyboarding
• Ability to view a computer for a long period of time

WORKING RELATIONSHIPS

• Report to a QA Lead or management level
• Work closely with peer engineers, group leads and other employees and departments within the company
• Limited direct work with customer and partners

COMPANY POLICY/PROCEDURES COMPLIANCE

Follow all company policies and procedures as well as local, state and federal laws concerning employment to include, but not limited to: I-9 information, EEOC, Civil Rights and ADA

BENEFITS

We value our employees’ time and efforts. Our commitment to your success is enhanced by our competitive compensation and extensive benefits package including paid time off, medical, dental, vision and 401k benefits and future growth opportunities within the company. Plus, we work to maintain the best possible environment for our employees, where people can learn and grow with the company. We strive to provide a collaborative, creative environment where each person feels encouraged to contribute to our processes, decisions, planning and culture.
